

Fayda Production Partners Integration & Onboarding Guide

This document provides:

- Key information about Fayda's components (eSignet, VeriFayda 2.0, offline authentication, etc.)
- Step-by-step onboarding guide for **startups and enterprises**
- Clarification on certification requirements and API access

Overview of Fayda Digital Identity Authentication Platform

The Fayda platform provides secure, interoperable, and privacy-preserving identity solutions. Our goal is to make digital identity **easily integratable** through modern standards like **OpenID Connect (OIDC)** and **REST APIs**.

Key components include:

Feature	Description	
eSignet (OIDC)	Fayda's OpenID Connect (OIDC) identity provider. Enables seamless login and eKYC provision for relying parties (RPs).	
VeriFayda 1.0	Fayda's eKYC and printable credential provider - simple and straightforward authentication and eKYC provision.	
VeriFayda 2.0	Fayda's eSignet powered Open ID Connect authentication and eKYC provider for relying parties.	
Offline Authentication	Fayda's offline identity verification where there is no internet access, using Fayda public key signed QR	

	code that can be verified locally.	
Relying Party	A government or private service provider organization that relies on Fayda's powerful authentication.	

Onboarding Procedure for Businesses and Startups

Whether you're a local startup or a business that has been operating in Ethiopia for a while, here's how to get started:

Step 1: Documentation Requirements

The prerequisite to get on-boarded as a Fayda partner is that your service need to be hosted within Ethiopia and your organization/business needs to have a valid trade license to operate in Ethiopia and must provide their TIN.

Step 2: Provide Required Documents

- Provide all organizational information
- Indicate the purpose of integration
- Specify the type of integration (e-KYC)

Step 3: Review & Approval

Once submitted, the Fayda team will:

- Review the application
- Request additional documents (if needed)
- Issue credentials upon approval

Step 4: Receive Integration Credentials

Once approved, you'll receive:

- **Fayda signed partner certificate**
- **Production Client ID**
- **Production resources such as URLs**

These are used to access the Fayda Platform APIs and authenticate users via VeriFayda 2.0.

Fayda Developer Community

Welcome to the **Fayda Developer Community!**

We're building a collaborative space for developers, businesses, and innovators who want to integrate with Fayda's **digital identity and e-KYC platform** — a space dedicated to developers, innovators, and open-source contributors who are passionate about digital identity and building secure, scalable systems.

At Fayda, we're working on OpenID Connect (OIDC) integrations to allow you to leverage Fayda in your service delivery.

India's unicorns boomed in the last decade because of the trust and scalability a foundational digital ID is able to offer. Our goal is to replicate this in a forward looking manner here in Ethiopia.
